## Real-Time Communication System Powered by AI for Specially Abled

In our society, we have people with disabilities. Communication between deaf-mute and a normal person has always been a challenging task. It is very difficult for mute people to convey their message to normal people. By understanding their feelings and problems, we can be able to produce better products and contribute to their lives. For our project, we are getting surveys from Specially abled people to understand what they truly require and desire.

# Empathy Map Canvas

Gain insight and understanding on solving customer problems.

1

Build empathy and keep your focus on the user by putting yourself in their shoes.
